

FINAL WEBSITE LAUNCH & TEAM CONTENT PROMPT

We have already developed the website. **Tomorrow is the official launch**, so this is the final production/content integration pass.

Do **not rebuild the entire website from scratch**. Work with the existing project and improve/integrate the missing content, interactions, media, team members, coaches, fighters, certificates, and profiles while preserving the existing design system and functionality.

1. IMPORTANT — SOURCE OF TRUTH

The project contains files/folders with the real content.

Before making changes:

- Inspect the entire project structure.
- Inspect the folder named `members` carefully.
- Inspect the folder named `vid` for available videos.
- Inspect the folder named `docs` for coach certificates/PDF documents.
- Inspect the file/folder named `coach-profile` for the coach profile information.
- Inspect all available images and assets before deciding what to display.

STRICT RULE

Never invent a person's name.

Only use names that exist in the provided project files, especially the `members` data.

Some names below may contain spelling mistakes. Treat the actual project files as the final source of truth and correct the spelling based on those files.

If a person does not exist in the project data, **DO NOT add them**.

2. COACHING TEAM

There are **three coaches**.

Make sure all three are prominently represented throughout the website where appropriate.

Head Coach / Owner

Ali Semwaga

Role:

- Owner
- Head Coach
- Main coach of the club

This should be visually treated as the primary coaching profile.

Second Coach

Havrimana Abdul

Role:

- Second Coach

Include his:

- Name
- Role
- Image if available
- Coach profile information if available

Third Coach

Izabayo Placid

Role:

- Third Coach

Include his:

- Name
- Role
- Image if available
- Coach profile information if available

Do not mix up their roles.

3. COACH PROFILES

There is a file/resource named:

coach-profile

Use the information inside it to create proper coach profiles.

The coach profiles should feel professional and authentic rather than simply displaying names.

Each coach profile can include, where the information exists:

- Profile image
- Full name
- Coaching role
- Biography
- Experience
- Achievements
- Specialization
- Certifications
- Other available information

IMPORTANT

Do not fabricate biographies, achievements, qualifications, experience, or statistics.

If information isn't available, simply omit that section or use a clean placeholder such as:

Profile information coming soon.

4. COACH CERTIFICATES

There are coach certificates in PDF format inside:

docs

Find the relevant coach certificate PDFs and integrate them into the website.

The certificates should be accessible from the appropriate coach profile.

For example:

Coach Profile → Certifications → View Certificate

Use a professional document viewer/modal or a dedicated certificate view.

Users should be able to:

- Open the certificate
- Read/view the PDF
- Close the viewer
- Open it again
- Download it if the existing website architecture supports downloads

Do not rename or fabricate certificate files.

Use the actual documents found inside docs .

5. MEMBERS / LEADERS

Add the club members from the project's actual `members` data.

Use the real names from the files.

The leadership/team section should clearly distinguish between:

Leadership / Staff

Show members with their actual roles.

For example, if the project data confirms these roles:

- Owner & Head Coach — Ali Semwaga
- Second Coach — Havrimana Abdul
- Third Coach — Izabayo Placid
- Secretary — Abdillillah Gahire

Only display roles that are actually confirmed by the project data.

Do not assign random roles to people.

6. FIGHTERS

There is also a group of fighters.

Create a dedicated **Fighters / Our Fighters / Team Fighters** section.

The fighters should be visually different from coaches and leadership.

For now, we only need:

- Fighter name
- Profile card
- Image if an actual image exists
- "Profile coming soon" or similar CTA if detailed profile information is not available

Do NOT invent:

- Fight records
- Weight classes
- Titles
- Wins/losses
- Ages
- Nationalities
- Achievements
- Training history

Those profiles will be added later.

Current fighter/member names mentioned for reference

Use these ONLY if they are confirmed by the actual `members` files:

- Tuyishimire Jean Millioner
- Iradukunda Sultan
- Hakizimana Christian
- Arnould Ishimwe
- Micyomyiza Yannick
- Karangwa Aime
- Honore
- Swabuli Nshimiyimana
- Phillipo
- Nshuti Gad
- Gisubizo Aime
- Iyamuremy Yannick

There are duplicates and inconsistent numbering in the original list, so **do not copy the numbering**.

The project's actual `members` data is the final authority.

7. EXISTING MEMBER LIST

Also integrate the broader member list into the website.

The following names were provided as a starting reference:

- Ali Semwaga — Owner & Head Coach
- Innocent Rugira
- Andrew Amani
- Sebikamba Yosuf
- Amour Martial
- Innocent Kayibanda
- Munyadida Selemani
- Abdilillah Gahire — Secretary
- Havrimana Abdul — Second Coach
- Karangwa Amiable
- Mutesi Mar Rita
- Umuhonza Conni
- Rashidason
- Izabayo Placid — Third Coach

Again:

Do not blindly use this list.

Compare it with the actual `members` files and use the project's verified names and roles.

8. VIDEO CONTENT

There is a folder called:

vid

Inspect it and integrate the available videos into the website.

Do not simply dump all videos onto one page.

Create a professional media experience.

Possible structure:

Training

Training footage and gym sessions.

Fight / Action

Fight footage and action clips.

Club

Club activities and community moments.

Highlights

The strongest videos displayed prominently.

Use the actual videos found in vid.

Do not create fake video titles or descriptions.

If the filenames are unclear, use simple safe labels such as:

- Training Session
- Fight Highlights
- Club Training
- Boxing Session
- Team Highlights

Only when appropriate to the actual video.

9. MEDIA EXPERIENCE

The video section should feel premium and interactive.

Implement where compatible with the existing website:

- Video cards
- Thumbnail previews
- Play button
- Modal/lightbox video player
- Smooth transitions
- Categories/filtering if there are enough videos
- Responsive layout
- Mobile-friendly controls

Do not make the page unnecessarily heavy.

Optimize video loading where possible.

Use lazy loading for videos/media that are below the fold.

10. TEAM UI/UX

The team section should immediately communicate:

Leadership → Coaches → Fighters → Members

Do not mix everyone into one confusing grid.

Suggested structure:

Leadership

Club leadership and key staff.

Coaching Team

Three coaches with clear hierarchy.

Fighters

Fighter cards with names and profile placeholders.

Members

Remaining verified members.

Use visual hierarchy to make the Head Coach clearly stand out.

11. INTERACTIONS

Everything should work together.

Make sure:

- Coach cards open coach profiles.
- Coach profiles connect to certificates where available.
- Fighter cards can eventually support detailed profiles.
- Videos open correctly.
- Navigation links work.
- Buttons work.
- Modals open and close correctly.
- Images load correctly.
- PDFs open correctly.
- Mobile navigation works.
- Sections scroll correctly.
- No broken links exist.
- No console errors are introduced.

Do not add fake buttons that do nothing.

If a feature is not implemented yet, make the UI clearly indicate that it is coming soon instead of pretending it works.

12. DESIGN DIRECTION

This is a **boxing/fighting club website**, so the visual identity should feel:

- Powerful
- Professional
- Athletic
- Premium
- Modern
- Energetic
- Trustworthy

Use strong typography, bold layouts, high-quality imagery, smooth animations, and good spacing.

Avoid making it look like a generic school/team website.

The website should feel like a real professional boxing organization preparing for launch.

13. RESPONSIVENESS

Test the entire experience on:

- Desktop
- Laptop
- Tablet
- Mobile

Pay particular attention to:

- Coach cards
- Fighter cards
- Video section
- Navigation
- Modals
- PDF viewer
- Images
- Typography
- Buttons
- Horizontal scrolling
- Touch interactions

Nothing should overflow or break on mobile.

14. DATA CONSISTENCY

This is extremely important.

Create one reliable source of truth for people/team data if the existing architecture allows it.

Avoid having the same person's name manually written in multiple places.

For example, if:

Havrimana Abdul

appears in the coaches section, members section, and profile section, make sure it comes from the same underlying data whenever possible.

This prevents spelling inconsistencies.

15. CLEAN UP DUPLICATES

The original content contains duplicates and incorrect numbering.

Examples include:

- Repeated fighter numbers
- Coaches appearing inside the fighter list
- Members appearing in multiple categories
- Different capitalization/spelling

Clean this up intelligently.

A coach must **not accidentally appear as a fighter** unless the actual project data explicitly identifies them as both.

Do not use the original numbering as IDs.

Generate stable unique IDs for each member based on the actual data.

16. DO NOT INVENT CONTENT

This rule overrides everything else.

Never invent:

- Names
- Roles
- Certificates
- Achievements
- Fight records
- Statistics
- Coach qualifications
- Biographies
- Dates
- Awards
- Social accounts
- Sponsors
- Videos
- Images

Only use information that exists in the project or has explicitly been provided.

17. FINAL PRODUCTION CHECK

Before finishing, inspect the whole website as if tomorrow is launch day.

Check:

Content

- All verified members are present.
- All three coaches are present.
- Head Coach/Owner is clearly identified.
- Second Coach is correctly identified.
- Third Coach is correctly identified.
- Fighters are separated from coaches.
- No unverified names are present.

Media

- Videos from `vid` work.
- Images work.
- Coach images are correctly matched.
- Certificates from `docs` work.
- `coach-profile` information is correctly integrated.

Functionality

- Navigation works.
- Buttons work.
- Modals work.
- Video playback works.
- PDF viewing works.
- Mobile menu works.
- No broken routes.
- No broken images.
- No console errors.

Performance

- Lazy-load large media.
- Avoid unnecessary dependencies.
- Avoid duplicate assets.
- Keep animations smooth.
- Optimize the initial page load.

Final rule

Do not stop after adding the content.

Actually test the interactions and integration across the whole website.

The result should be **launch-ready tomorrow**, not just visually complete.

Use the existing project architecture, preserve working functionality, and make only the changes necessary to deliver a polished, production-ready boxing club website.
